	tion to Sketch of Aluminum Plant in Krasnoturinsk
3	new shops of the aluminum plant, construction of which allegedly started
i	n 1954 and was completed at the end of 1955.
1	Electric power plant serving the aluminum plant.
(Operating shops of the aluminum plant.
	Plant stacks some are allegedly 80, 150, and 200 meters high.
	Central heating plant for the use of the aluminum plant and the town.
	No detailed information available.
	Railroad station and coal unloading installations. Coal for plant
	needs arrives by rail from an unknown place.
	3 unidentified plant shops.
	Bath house for free workers.
	New reinforced concrete metal parts shop of the cinder
	block plant. The shop manufactures metal parts for the reinforced con-
	crete. Building of this shop started in 1953. Manufacture of metal
	parts in this shop was begun in the spring of 1954. No other information.
	Reinforced concrete shop of the cinder
	block plant. Manufacture of metal parts for reinfored concrete takes
	place here.
	Cinder block plant. 3-story building. Under blocks 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2,
	Cinder block plant. 3-story building. Cinder blocks 19 x 38 x 19 centimeters and 100 x 100 x 100 centimeters are manufactured out of
	centimeters and 100 x 100 x 100 centimeters are manufactured out of a mixture of cement and cinders. There were 3 machines for the mechanical

one to five. Block making machines: were 1 x 1 x 5 meters in size.
Two types of small cinder blocks were manufactured: hollow ones
and the plain ones . Two machines manufactured
the hollow ones, and one machine the plain ones. Cinders were received
from various towns: Krasnoturinsk, Serov, Sverdlovsk, and Nizhni Tagil.
This could be seen plainly from the labels on the railroad freight
cars bringing cinders to the plant. Manufacture of large cinder blocks
was done manually by pushing the prepared mixture into special forms
made from wooden bing boards. The cement and cinders for the manufacture
of the mixture were taken to the 3rd floor of the shop by a transporter.
From the 3rd floor the cement and cinders were taken down to the second
floor in small carts, where there were three mixing machines 0.8 x 1 x
la meters in size. The prepared mixture of cement, cinders, and water
from the mixers was poured into special hoses and sent to the first
floor to the block manufacturing machines. Each block manufacturing
machine could manufacture 2,000 to 2,500 blocks per eight hours. The
manufacture of large blocks was
allegedly of an experimental nature. No more than two or three blocks
were manufactured daily. The entire production of this plant was
utilised for building construction in Krasnoturinsk, Serov, and other

5.		
tw	o connected b	uildings,
marked on the enclosed sketch as No. 1 and locate	d between the	road and
building No. 3, were referred to by the prisoners	as the "fift	h series."
this term		was used in
the plant to indicate the consecutive development	stages of th	ne plant.
It would appear that the shops built when constru	action of the	plant was
launched were referred to as "series one." The s	hops buils su	bsequently
through the years were referred to as series two	to series for	r. The latest
shops were named series five. If this is true, i	it would be lo	ogical for all
three buildings marked No. 1 on the sketch, const	truction of wh	nich started
at the same time, to have been referred to as the	fifth serie	es." However,
this was not the case, and this term was used onl	ly in regard t	to the two
previously mentioned buildings. The only explana	ation	in
this regard was that the northwestern building No	. 1 was sepai	rated from the
other two by a high wooden board fence and, there	efore, was pro	obably not an
organic part of the block. It is significant that	at in referen	ce to the shops
where they worked, the prisoners never mentioned	any descript	ive or other
terms to designate them, but always the number of		
"where do you go" or "Where did you work today" w		
"series 2" or "series 4," etc.
